# Amtryke Adaptive Tricycle Waiver Form

(Must be filled out completely by adult rider or parent/guardian)

AMBUCS members nationwide are dedicated to creating opportunities for mobility and independence by providing Amtryke adaptive tricycles, offering educational scholarships to therapy students and performing various forms of community service.

**Purpose:** The Amtryke adaptive tricycle creates a feeling of freedom, builds self-esteem, strengthens muscles and improves motor coordination and range of motion—all while making exercise fun.

**Steering:** Initially, the rider may have difficulty turning or changing directions. Encourage the rider to go straight ahead, back up and slowly turn around. On many models there are three steering options for the Amtryke. On the front column of the tricycle you will find two holes for the steering pin. The top hole is straight steering, the bottom hole allows a 20-degree turning radius. Leaving the pin out gives the rider free steering.

## Safety Cautions

- Fast speeds and sharp turns can cause the Amtryke adaptive tricycle to tip or turn over.
- Always wear a helmet when riding an Amtryke. Use of other protective gear is highly recommended.
- Adult supervision required if used by younger or developmentally delayed riders.
- Use caution near vehicles, swimming pools and other bodies of water, hills, alleys and sloped driveways.
- Always wear shoes.
- Never allow more than one rider.
- Use of the steering pin is recommended to prevent over-steering or possible tip-overs.

**Thanks for choosing an Amtryke adaptive tricycle!**

In order to accommodate the widest variety of people, Amtryke offers many tryke models and each can be customized in a variety of ways. Following the steps below will help you choose to the perfect tryke for your client from what might seem like a dizzying array of options.

Remember you can always refer to our website, [www.amtrykestore.org](http://www.amtrykestore.org), or the Amtryke catalogue for more information and product images.

**Step 1:** Fill out the first page of the Amtryke Assessment Form.

**Step 2:** Choose the way the tryke will be propelled: **Hand & Foot, Foot, or Hand**. Your choice should be based on the rider's ability and therapy goals.

**Hand & Foot** trykes improve coordination, strength and range of motion. Using all four extremities helps with weakness in any area, even general weakness, and can positively affect tone.

**Foot** trykes were developed in response to requests from therapists for a traditional tricycle for riders with special needs.

**Hand** trykes are designed for persons whose lower limbs lack function or those who need special therapy for the upper extremity.

**Step 3:** Take rider's measurements from the front of this Assessment Form and compare them to our Sizing Chart. (This will narrow the choices considerably)

**Step 4:** Choose a drive. (If it doesn't mention a choice, then ignore this step.)

Amtrykes come with two drive possibilities: **fixed** drive or **geared** drive. Tryke models have been carefully designed so the drive matches the therapeutic goals of the equipment; therefore all drives are not available on all trykes.

A **fixed** drive, commonly known as a 'fixie,' works on a mechanical level to help individuals make a full pedal rotation. The foot crank is constantly in motion for full therapeutic effect. Coasting is not possible with a positive drive; when limb motion stops, the bike does as well.

Riders of **geared** drive trykes must be able to make a complete pedal rotation on their own. This tryke is suitable for riders who need help with balance and a stable sitting position and who have the cognitive ability to steer successfully and apply the coaster brake or hand brake. The key feature of geared trykes is the ability to coast.

**Step 5:** Chose any adaptations and/or accessories needed by the rider. *Each tryke model can only be customized in the ways noted in its own model section in the Tryke Selection Forms or with the generic accessories listed below. If a customization option is not listed, it is because of design or other practical constraints in offering it on a particular model.*
